

Notes on the function `gsw_enthalpy_CT_exact(SA,CT,p)`

This function, `gsw_enthalpy_CT_exact(SA,CT,p)`, evaluates the specific enthalpy h in terms of the input variables Absolute Salinity S_A Conservative Temperature Θ and pressure p . This function uses the full TEOS-10 Gibbs function $g(S_A, t, p)$ of IOC *et al.* (2010), being the sum of the IAPWS-09 and IAPWS-08 Gibbs functions.

This function is simply calls to two other GSW functions as follows,

```
t = gsw_t_from_CT(SA,CT,p);  
enthalpy_CT_exact = gsw_enthalpy_t_exact(SA,t,p);
```
